

Carpenter Pencil Kit Instructions

You will need:

Drill bits: 3/8"

ProX Bushing

Drill, Tube & Square your blanks & mount on your mandrel *take care not to trim beyond the length of the tube as this may interfere with the operation of the mechanism and assembly*

Turn your blank down to the bushings. Polish & finish blank

Lay out your parts based on the diagram below

Diagram A

Assembling the pen

1. Press the sleeve into either end of the tube.
2. Put clip on end coupler and press the end coupler into the opposite end of the tube.
3. Screw the tube (sleeve end) to the pencil mechanism.

4. Screw the cap connector to the cap (with sharpener).
5. Push the cap assembly to the end coupler. Make sure the cap connector catch the pencil mechanism.

The pencil operates by pushing down on the cap with sharpener. This clicks the lead out.
